

MAGic

Screen magnification software with speech

MAGic is a software solution ideally suited for computer users with low vision. It combines powerful magnification features and enhancements with synthesized speech for screen reading.

MAGic lets you magnify your computer screen from 1 to 16 times its usual size. Choose from several adjustable views to see both magnified and unmagnified areas of the screen.

Speech features assist you in processing the information on your screen. MAGic can read text that you type or point to with the mouse. MAGic also scrolls the screen and highlights words as it reads them aloud.

Mouse and cursor enhancements help you track

the location of the mouse pointer and cursor on the screen. You can choose from a wide variety of enhancement styles. MAGic lets you change the color of these enhancements, apply transparency effects, adjust their size, and more.

Color enhancements let you change how colors appear on your screen. You can apply tinting, view your screen as two colors (monochrome), invert brightness and colors, and switch colors. All these enhancements can be combined to meet your specific needs.

With all these features and many more, MAGic brings your world a little closer.

Mouse Enhancements
assist in locating &
following our mouse

Cursor enhancements
aid in finding and
tracking the cursor

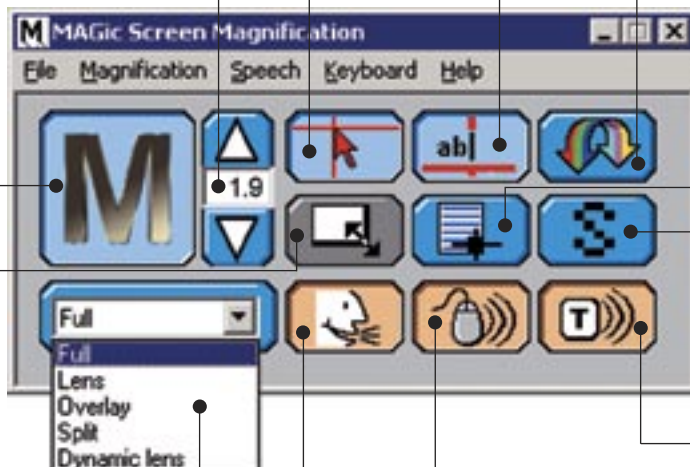

Color enhancements
improve screen legibility
by adjusting contrast,
brightness and color

25 magnification
levels (1x to 16x)
